

from strategy to impact

Binary Awarded Subcontract Under Navy's MSC Ashore Program *Binary architects to help guide the Navy's technical architecture and capital planning.*

Bethesda, MD., November 15, 2006 – Binary Group, Inc. was awarded a subcontract under the Navy's Military Sealift Command's (MSC) Ashore Program by the prime contractor, Science Applications International Corporation (SAIC). This indefinite-delivery/indefinite-quantity subcontract establishes a six-year period of performance and enables SAIC to purchase services through the execution of task orders.

The MSC Ashore Program provides overall Information Technology (IT) Engineering and Ashore Operation Support Services to the Command, Control, Communications and Computer Systems Directorate (N6 – C4S) who is responsible for maintaining the worldwide communications and information system requirements of the MSC. As part of SAIC's team, Binary Architects will guide the Technical Architecture and capture the major technologies and the related approved standards needed to support MSC's operational environment. They will provide IT project teams within MSC with standards reference materials and standards specification guidelines and will work with them to develop and apply technological standards.

The Technical Architecture is being developed in part to resolve issues associated with standing up new applications, to support the adaptations of COTS and GOTS packages, and to improve the integration and adaptability of new IT systems. At maturity, the MSC Technical Architecture will provide a central and cohesive framework that guides the purchase, deployment and management of IT across MSC and will ultimately assist in making sound, OMB-compliant, IT investment decisions.

"We are happy to be a part of SAIC's winning team. This award offers us the opportunity to strengthen our foothold within the Navy, allows us to build on the work we've already started; moreover, it enables us to continue leveraging the expertise we've been providing at the top echelons within the Army," said Rose Wang, Binary chief executive officer.

Binary is currently providing strategic enterprise planning and management services at the enterprise-level within the Army's Program Executive Office Enterprise Information Systems (PEO EIS) and Chief Information Officer (CIO/G6) directorates – overseeing the delivery of architecture, providing complete management of the technical lifecycle in constituent projects, and the delivery of high quality supporting design documentation.

About Binary Group

Headquartered in Bethesda, Md., Binary Group Inc. serves mission-driven leaders with enterprise-level responsibility in information technology by providing best value, strategic IT program support services that are free of organizational conflict of interest (OCI). Binary delivers strategy, architecture, governance, engineering design, and related management and planning to federal government customers including U.S. Army, U.S. Navy, Defense Dept.'s Office of the CIO and Defense Information Systems Agency (DISA). Binary is a 2006 Inc. 500 recipient and two-time recipient of the *Washington Technology* Fast 50 award.
